

Phase 4: Features of Natural Language Processing (NLP) & Conversational AI

1. Azure AI Language (Features of NLP)

Sentiment Analysis: Evaluates text to determine if the sentiment is positive, negative, or neutral, along with confidence scores.

Key Phrase Extraction: Identifies the main concepts or talking points within a document or text string.

Named Entity Recognition (NER): Identifies and classifies entities in text into predefined categories such as person, location, date, or organization.

2. Azure AI Speech (Speech Services)

Speech-to-Text (Transcription): Converts spoken audio into written text.

Text-to-Speech (Synthesis): Converts written text into natural-sounding spoken audio.

3. Azure AI Translation (Translation Service)

Provides real-time text translation across dozens of supported languages.

4. Conversational AI: Azure AI Bot Service

A platform for creating smart, conversational bots that can interact with users naturally across multiple channels (web, chat apps).
